

### Abstract of the Disclosure

An ankle brace of the type adapted to extend along the lateral and medial aspects of an injured ankle and lower leg for supporting the ankle during healing. A medial and lateral side support are provided for extending along the respective medial lateral aspects of the ankle and lower leg and includes an elongate, rigid support members, each having a lower end of sufficiently narrow width and thinness to fit inside a shoe being worn by a wearer of the brace, A soft, flexible perimeter edge portion is mechanically adhered to and extends outwardly in overlapping, non-interfitting relation to the support members for protecting the leg and ankle from irritation resulting from contact with edges of the support members. A connector connects the medial side support and lateral side support together at their respective lower ends and extend under the foot of the wearer of the brace.
